

RJ695-15X Pulse Short Circuit Tester Inspection Tooling

Product Description

RJ695-15X is suitable for RJ69XX series of impulse short-circuit testers spot inspection work, and it can quickly inspect the tester working status, to realize the spot inspection of the working condition of the equipment.

Key Features

- Multi-speed design, can simulate the state of multiple types of batteries and distinguish different alarm codes;
- Specialized testing, portable and easy to operate, quick determination, no need for power supply;

Specification

Serial number	Alarm type	Status indication
1	E01	Test circuit open status indication: Tp red status indication.
2	OK	Test pass status indication
3	E02	Vp failure: the output voltage does not reach the set value, Vp red status indication.
4	E06	Vd2 failure: abnormal voltage drop in voltage output stage, Vd2 red status indication
Test Mode	Free Discharge	
Operating mode	manual control	
Rated voltage	≤ 1000	
Suggested parameters	Voltage: 200V, Time: 300ms, Hold 100ms, Vd1:5%, Vd2:10%	
Attachment	1 instruction manual without test cable	

National Service hotline: 4008-515-616

No.38 Longfei Road, Chengyang District, Qingdao
