

RJ695-15 Insulation Resistance Tester Spot Inspection Tooling

Product Description

Insulation Resistance Tester Spot Inspection Tooling is based on insulation resistance meter calibration procedures designed and manufactured for a variety of models, different specifications of domestic, imported insulation resistance meter (megohmmeter) and similar instrumentation testing, suitable for different levels, all walks of life, the needs of users.

Key Features

- Inspecting all kinds of insulation resistance meters with rated voltage lower than 2000V.
- Can be used for quick spot inspection of production line equipment.
- Can be used as a standard resistor for high and medium resistance values.

Specification

Gear	1	2	3	4	5	6
Parameters	10MQ	20MQ	50MQ	100MQ	200MQ	500MQ
Accuracy	±2%					
Operation Mode	Manual control					
Rated voltage	≤2000					
Attachment	1 instruction manual without test cable					

National Service hotline: 4008-515-616

No.38 Longfei Road, Chengyang District, Qingdao
